U.S. Cutting Tool Consumption Up 8 Percent In February

February 2019 U.S. cutting tool consumption totaled \$205.6 million according to the U.S. Cutting Tool Institute (USCTI) and AMT – The Association For Manufacturing Technology. This total, as reported by companies participating in the Cutting Tool Market Report collaboration, was down 4.4 percent from January’s \$215.1 million and up 8 percent when compared with the \$190.3 million reported for February 2018. With a year-to-date total of \$420.7 million, 2019 is up 13 percent when compared with 2018.

These numbers and all data in this report are based on the totals reported by the companies participating in the CTMR program. The totals here represent a significant market share of the U.S. market for cutting tools.

“The 8% year over year increase posted in February reflects the continuing strength in the US manufacturing base. We are hearing of signs that the market’s growth rate may slow later this year but February’s results are getting the year off to a good start,” said Phil Kurtz, President of USCTI.

According to Greg Daco, Chief US Economist at Oxford Economics, “Cutting tool shipments are off to a solid start in 2019, bucking the trend of cooler momentum in the broader durable goods category. A very

solid 13% gain in year-to-date cutting tool shipments through February puts the category well ahead of the healthy 6% year-to-date rise in overall durable goods shipments.

Leading manufacturing activity indicators point to healthy, but gradually cooling momentum in 2019. Slower global growth, lingering trade tensions and reduced fiscal stimulus will weigh on growth while elevated private sector confidence, a solid labor market and a more dovish Fed support activity.”

The Cutting Tool Market Report is jointly compiled by AMT and USCTI, two trade associations representing the development, production and distribution of cutting tool technology and products. It provides a monthly statement on U.S. manufacturers’ consumption of the primary consumable in the manufacturing process – the cutting tool. Analysis of cutting tool consumption is a leading indicator of both upturns and downturns in U.S. manufacturing activity, as it is a true measure of actual production levels.

Historical data for the Cutting Tool Market Report is available dating back to January 2012. This collaboration of AMT and USCTI is the first step in the two associations working together to promote and support U.S.-based manufacturers of cutting tool technology.

The graph below includes the 12-month moving average for the durable goods shipments and cutting tool orders. These values are calculated by taking the average of the most recent 12 months and plotting them over time.

AMT – The Association For Manufacturing Technology represents U.S.-based builders and distributors of manufacturing technology – the advanced machinery, devices, and digital equipment that U.S. manufacturing relies on to be productive, innovative, and competitive.

Located in McLean, VA, near the nation’s capital, AMT acts as the industry’s voice to speed the pace of innovation, increase global competitiveness and develop manufacturing’s advanced workforce of tomorrow. With extensive expertise in industry data and intelligence, as well as a full complement of international business operations, AMT offers its members an unparalleled level of support. AMT also produces IMTS – The International Manufacturing Technology Show, the premier manufacturing technology event in North America. The CTPG report is compiled by AMT and all data in the report is based on the totals of actual data reported by companies participating in the CTPG program.

The United States Cutting Tool Institute (USCTI) was formed in 1988 and resulted from a merger of two national associations representing the cutting tool manufacturing industry. The Institute works to represent, promote, and expand the U.S. cutting tool industry and to promote the benefits of buying American-

made cutting tools manufactured by its members. Membership includes North American manufacturers and/or remanufacturers of cutting tools, as well as tool surface treatment providers. Members, which number over 70, belong to ten product divisions: Carbide Tooling, Drill & Reamer, Metal Cutting Saw Blades, Milling Cutter, Polycrystalline Diamond & Polycrystalline Cubic Born Nitride, Substrate Materials, Surface Coating, Tap & Die, Tool Holder and All Other Tooling. A wide range of activities include a comprehensive statistics program, human resources surveys, development of product specifications and standards, and semi-annual meetings to share ideas and receive information on key industry trends.
